

SCOPE OF ISO 9001 QUALITY MANAGEMENT CERTIFICATION

MPGMF0001

Review: 23

Issue date: 03/15/2018

The scope of ISO 9001 certification for GMF in Spain involves:

- Rental, maintenance and control of railway machinery production for train transport and railway works.
- Maintenance activities for locomotives, auxiliary rolling stock and wagons.
- Production and commercialisation of railway material.
- Production, commercialisation and assembly of mechanical parts and subassemblies for industrial use.

The scope of ISO 9001 certification for GMF in Portugal involves:

- Maintenance activities for locomotives, auxiliary rolling stock and wagons.

GMF does not carry out activities of design and development of new products and services. On this matter, the non-application of the section 8.3 requirement included in the UNE-EN ISO 9001 standard (Design and development of products and services) is proved in the scope of the management system.

Occasionally, GMF executes activities of technical documentation on specifications, such as plans or calculations, in the development of its products and services. No design is involved in these activities and thus, by fulfilling the reference specifications.
