

ENVIRONMENTAL POLICY

COMSA Corporación has maintained, since its foundation, a constant concern to carry out projects, works and services that meet the current and future expectations and needs of our clients, our collaborators and the society in general.

This permanent objective brings about continuous improvement of our environmental performance guaranteeing not only compliance with the requirements established in the legal and regulatory framework of any region in which we work but also compliance with the specific requirements of our clients, the requirements to which we voluntarily join and those we are promoters of too.

For this, **COMSA Corporación** integrates, as an organizational value, the respect to the environment in which we work, promoting a culture that puts the prevention of pollution against the correction of damages and in which the commitment and involvement of all workers is essential.

This Culture is based on the following Principles and Values:

- 1.- Planning and Innovation, analyzing in a constructive way what we do, fleeing from routine and innovating to eliminate or minimize environmental impacts.
- 2.- Coordination and participation of all workers, our own and our collaborators', with particular emphasis on the personal responsibility of each one so that work conditions maximize respect for the environment.
- 3.- Strictness and professional competence, guaranteeing the necessary training, information, experience and environmental awareness.
- 4.- Establishing communication channels with all interested parties as a more direct way to know, measure and improve the most relevant impacts.
- 5.- Systematic review of the set of processes and indicators as a basic tool for their continuous improvement.

COMSA Corporación provides the necessary resources to make possible its vision of a sustainable world in the long term for what it periodically reviews this policy and the actions derived from it.

As a sign of commitment and approval of this Policy, this document is signed in Barcelona on July 31, 2018.

Guillermo Lorenzo Rodrigo.
Chief Executive Officer.
Infrastructure and Industrial Engineering Area.
