

QUALITY POLICY

COMSA Corporación has maintained, since its foundation, a constant concern to carry out projects, works and services that meet the current and future expectations and needs of our clients, our collaborators and the society in general.

For this, **COMSA Corporación** systematically analyzes the environment in which we work, reviewing those processes that allow us to adapt our internal capabilities to the established requirements, and establishing continuous improvement actions aimed at surpassing the ever increasing expectations of our customers.

As a result of this analysis, **COMSA Corporación** has established, as the basis of its business culture, the following Principles and Values:

- 1.- Focusing on the client, concentrating our efforts on knowing their needs, involving them from the beginning of the project and offering them innovative solutions that exceed their expectations.
- 2.- Excellence and initiative, implanting the best solutions for each need and guaranteeing the execution of the projects with the highest quality standards.
- 3.- Human team as the main asset of the Organization whose professionalism and talent, at the service of our clients, guarantees rigorous and quality projects.
- 4.- Innovation and technology as a differential factor of our chain of values, offering our clients advanced technological solutions that anticipate their needs and improve the efficiency of their projects.
- 5.- Orientation to results and the achievement of objectives, planning rigorously and ensuring compliance with the requirements and commitments acquired.

The effective application of these Principles and Values has allowed **COMSA Corporación** to achieve its current prestige in the sector and must continue to guide the efforts of all the people that comprise it to ensure profitable, balanced and sustained growth, acting in accordance with the principles of Integrity and Responsibility.

To achieve this, **COMSA Corporación** provides the necessary resources, promotes the awareness and participation of the entire human team and reviews periodically this Policy and the actions that derive from it.

As a sign of commitment and approval of this Policy, this document is signed in Barcelona on July 31, 2018.

Guillermo Lorenzo Rodrigo.

Chief Executive Officer.

Infrastructure and Industrial Engineering Area.
